Document Consistency Audit

Date: 2026-08-27 **Auditor:** AI Architect **Status:** COMPLETE

Audit Scope

DOC-00 through DOC-24 were reviewed for internal consistency regarding technology stack, naming conventions, RBAC, Multi-tenancy, and milestones.

Findings

1. **Technology Consistency:** PASS. All documents specify React, Vite, Tailwind, NestJS, PostgreSQL, Prisma, JWT, Argon2id. No conflicting technologies were found.
2. **Architecture Consistency:** PASS. Modular monolith is enforced across SAD, Code Standards, and APIs.
3. **Database Terminology:** PASS. snake_case plural naming convention observed (organizations, users, organization_members).
4. **API Terminology:** PASS. REST APIs mapped correctly to /api/v1 base paths.
5. **RBAC Consistency:** PASS. resource.action syntax is used consistently across BRD, SAD, and UI specs.
6. **Multi-Tenancy Consistency:** PASS. Tenant isolation via organization_id context resolution is enforced in SAD, DB Design, and Security chapters.
7. **Module Naming:** PASS. Modules follow the Universal Business Operations nomenclature.
8. **MVP / Post-MVP Separation:** PASS. Core framework (Auth, Tenants) is strictly mapped to MVP (M01-M12), while business modules (Inventory, Purchase, Shipment) are clearly Post-MVP (M13-M20). Billing is marked Future (M21).
9. **No Contradictory Requirements:** PASS.
10. **No Hardcoded Industry Logic:** PASS. Configurable attributes (Custom Fields) explicitly prohibit if (industry == 'jute') anti-patterns (DOC-16).
11. **Assumptions Identified:** PASS. Documented legacy VFP schema unknowns and assumption of global email uniqueness.

Recommended Next Steps

- Request business stakeholder review for DRAFT documents.
- Once approved, proceed to Milestone M01 (Repository & Tooling). **DO NOT proceed without explicit user approval.**
