DOC-10: UI/UX Design System

Version: 1.0 | **Status:** APPROVED | **Date:** 2026-08-27 **Purpose:** Establish design rules, component guidelines, and layout architecture. **Owner:** Product Manager

Design Principles

- **Enterprise-focused:** Professional, clean, data-heavy optimized.
- **Responsive:** Desktop-first, but fully usable on mobile/tablet.
- **Tech Stack:** React, Tailwind CSS, shadcn/ui.
- **Theme:** Light (default) & Dark mode support. Configurable via Settings.

Application Shell

- **Sidebar:** Collapsible, persistent, permission-aware. Includes core navigation (Dashboard, Organization, Users, Roles, Settings).
- **Top Header:** Breadcrumbs, Global Search (Cmd + K), Notifications, User Profile.
- **Content Area:** Standardized Page Headers (Title, Description, Primary Action), Tables, and Forms.

Components & Patterns

- **Tables:** Must support Search, Filter, Sort, Pagination, Row Actions. Mobile uses horizontal scrolling or card transformation.
- **Forms:** Require validation, loading states, server error handling, disabled submit during requests.
- **Loading:** Use skeleton loaders instead of blank screens. Avoid excessive or heavy animations.
- **Error States:** Graceful fallbacks. Do not expose raw technical details (SQL errors) to end users.
